

California MLPA Master Plan Science Advisory Team
Draft External Data Formally Submitted to the Master Plan Science Advisory Team
January 24, 2011

Based on experiences in prior Marine Life Protection Act (MLPA) study regions, the MLPA Master Plan Science Advisory Team (SAT) anticipates that external groups will submit data intended to enhance SAT analyses and evaluations. However, data submissions may be numerous, and may come from a variety of sources, in a variety of conditions, covering a wide range of topic areas.

A protocol for handling incoming data from external sources was adopted by the SAT on March 17, 2010. This protocol was adopted to more efficiently and effectively determine whether such data are beneficial to incorporate as the SAT conducts scientific evaluations in support of the MLPA process. This document lists submitted external data received to date that have gone through the staff review process.

Submitted By	Organization	Date	Type of Data	Data Format	Recommendation/Status
---------------------	---------------------	-------------	---------------------	--------------------	------------------------------

To date no external data has been submitted to the SAT for the MLPA North Coast Study Region.
