Marine Life Protection Act Initiative

Summary of Potential Impacts of March 2008 NCCRSG MPA Proposals on Commercial and Recreational Fisheries

DRAFT

Presented by Dr. Astrid Scholz - Ecotrust April 3, 2008 SAT Meeting, Pacifica, CA

Outline

- Overview
- Commercial Fisheries
 - Potential Impacts on Fishing Grounds (Area and Value)
 - Consideration of Existing Closures
 - Potential Impacts on Individual Fishermen
 - Potential Socioeconomic Impacts
- Recreational Fisheries
 - Potential Impacts on Fishing Grounds (Area and Value)

Overview

Methods: Seen many times before...

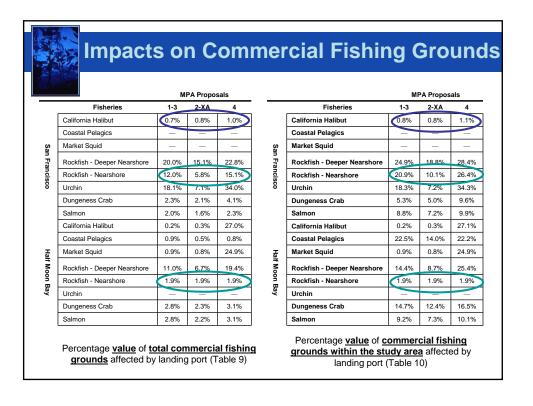

Commercial Fisheries

- Focused on eight fisheries (California Halibut, Coastal Pelagics, Market Squid, Rockfish – Deeper Nearshore, Rockfish – Nearshore, Urchin, Dungeness Crab and Salmon)
- Results reported at study region and port group level

Recreational Fisheries

- Focused on five fisheries (California halibut, Dungeness crab, salmon, rockfish/lingcod complex and striped bass –pier/shore)
- Results reported by user group and by sub-region

Recreational Fishery Impacts

- Identical approach to commercial fisheries with one exception—the analysis is done using only stated importance values from the interviews.
- The data should only be considered at the sub-region level, not at the entire study region level—Why?
 - The data are not representative of the entire population of recreational fishermen due to the less than desirable (less than statistically significant) sample size.
 - There was little or no data collected from recreational fishermen north of Bodega Bay.
 - The data represents interviewees' areas of <u>value</u>, not areas of effort.
 - The data represents interviewees' areas that are important to them over their entire recreational fishing experience, not necessarily the areas that are important to them currently.

Next Steps

- Final round of analysis for the MLPA North Central Coast Study Region
- Final report for North Central Coast
- Beginning to think about data collection for the MLPA South Coast Study Region
